

SILEXX OEMS

The Efficient Advantage

Cboe Silexx's passion and single focus to win in every part of our approach to risk management and trading, clearly places SILEXX OEMS in a league of its own.

How?

Efficiency is the culmination of power, speed, aggregation, access, and simplicity. SILEXX OEMS leverages its vendor neutrality and brings together top-tier liquidity providers and clearing firms in one platform.

- **Execution:** SILEXX OEMS offers a multitude of routing destinations. This not only expands the access to top level execution algorithms and dark pools, it additionally provides redundant routing paths to a broad range of market participants.
- **Clearing:** We can give you access to top-tier firms.
- **Risk Management:** Perform risk analysis, volatility impact studies, and evaluate extreme risk conditions in real-time.
- **Intuitive Design:** SILEXX OEMS's simple-to-use interface will have you trading and managing risk in minutes.
- **Value:** Time and money are two important considerations for all trading operations. By combining risk management, trading and analytics into one system and integrating into major clearing firms and execution gateways, SILEXX OEMS can save you time and money.
- **Accessibility:** It must be intuitive. We believe the ease at which you can access relevant information is vital. SILEXX OEMS's interface is designed and continuously evaluated to be highly intuitive so as to promote easy access to that valuable information.
- **Agnostic:** We believe in the freedom of choice.
- **Customer Service:** The customer is King. Our staff of market professionals is proficient with the inner workings of the financial markets and technical systems. Not only are we here to assist your needs, we also value your input to make our services better.

The answer is simple, SILEXX OEMS.

Order Ticket

Algo Ticket

Execution

Efficient execution in the market place is about speed and accessibility. SILEXX OEMS offers a variety of execution services in conjunction with our execution partners, including API.

Order Tickets

Two different order tickets that are customizable: Order Ticket and Depth Ticket.

Complex (Multi-Leg) Orders

Place multi-leg option strategies or buy-write orders natively at the exchanges and enjoy the benefits of reducing leg risk.

Algo Ticket

Trading VWAP, TWAP, or a host of execution algorithms? Our Algo Ticket makes it easy to set-up and execute.

Basket Trading

Store a variety of orders including, complex orders, spreads, equities, options, or futures. Sort, change, and work a list of orders from one screen.

API

If you have designed your proprietary trading system, then our API will give you access to market data and execution.

Risk Management

SILEXX OEMS offers a risk management suite that analyzes financial products and portfolios, measures volatility impacts, risk and what-if situations in real-time.

What happens if volatility increases 25%? A stock gaps on news? Fed changes interest rates?

SILEXX OEMS is more than a trading tool, providing you with the ability to access your (or your client's) positions, receive drop-copies from third parties, and analyze risk, all in real-time. This makes SILEXX OEMS an exceptional platform for risk managers as they can view firm-wide risk, aggregate executions from third parties and proprietary systems and multiple clearing firms on one screen.

Get in control with Risk Radar X – the solution!

Our flagship risk module uses a basic hierarchy structure to view risk from a top-down approach. Being able to view firm-wide risk on one screen is paramount in these markets; however, the “WHERE is the risk coming from?” question is just as vital. With one click you can sort firm risk by a variety of methods: by product, account number, margin, or even through customized risk considerations.

Account	P&L Net	Current IC	Min. Req.	Net Stock #	Net Call #	Net Put #	Delta	-15.00%	-12.00%	-9.00%	-6.00%	-3.00%	3.00%	6.00%	9.00%	12.00%	15.00%

Volatility Skew

Charting

Analytics

Analytics are an important part of risk management, developing strategies, and making trading decisions. SILEXX OEMS offers a full array of features to help you understand your position as well as the market; from charting to volatility analysis.

Position Analyzer

View a powerful graphical representation of your position. Switch between the current P&L, as well as GREEKS. Create “what if” positions and measure market impacts based on price, volatility, and interest rate changes. You can even design new positions and execute complex option orders right from the Position Analyzer screen.

Volatility Skew

Are traders buying more puts than calls? How much has volatility increased? The Volatility Skew module gives you a graphical representation of the implied volatility of a financial product. You can also change and set the entire skew or individual volatility levels as you anticipate the market changing.

Charting

SILEXX OEMS includes a complete charting package with a host of customizable technical analytics. Charts have a link feature to other modules that auto-populates them with financial products in one click.
